Academic Year 2016–2017

Abstract

Robotic companions have been proved effective to promote social skills. It is thought that this capability is enhanced when the robot exhibits some “emotional” behavior.

Contents

Introduction	1
1 First chapter	2
1.1 Games	2
1.1.1 Marco-Polo Game	2
1.1.1.1 Input	2
1.1.1.2 Goal	2
1.1.1.3 Activities	2
1.1.1.4 Superability Manual Mappings	2
1.1.1.5 HW required	3
1.1.1.6 SW required	3
1.2 Interactions	3
1.2.1 Talk2Teo	3
1.2.1.1 Input	3
1.2.1.2 Goal	3
1.2.1.3 Activities	3
1.2.1.4 Superability Manual Mappings	4
1.2.1.5 HW required	4
1.2.1.6 SW required	4
Conclusions	5

Introduction

The goal is to re-engineer and extend the existing version of Teo 2 with a Cognitive Module (enabling emotional sensing, expression features, adaptive Human-Robot Spatial Behavior and adaptive polite/intimate Behavior) and possibly evaluating the results against Teo 1.

The document is structured in this way:

- Chapter 1: it describes some possible scenarios

Chapter 1

First chapter

1.1 Games

1.1.1 Marco-Polo Game

1.1.1.1 Input

The therapist selects «Marco-Polo Game».

1.1.1.2 Goal

Talking to the user searching form him.

1.1.1.3 Activities

1.1.1.4 Superability Manual Mappings

Area: Socialization

- shows different emotional states based on the context

- greets verbally on demand
- responds verbally to greetings

1.1.1.5 HW required

Led matrix, speaker, microphones, motion/distance sensors, remote pc.

1.1.1.6 SW required

Face simulator, voice recognizer, voice simulator, remote control software.

1.2 Interactions

1.2.1 Talk2Teo

1.2.1.1 Input

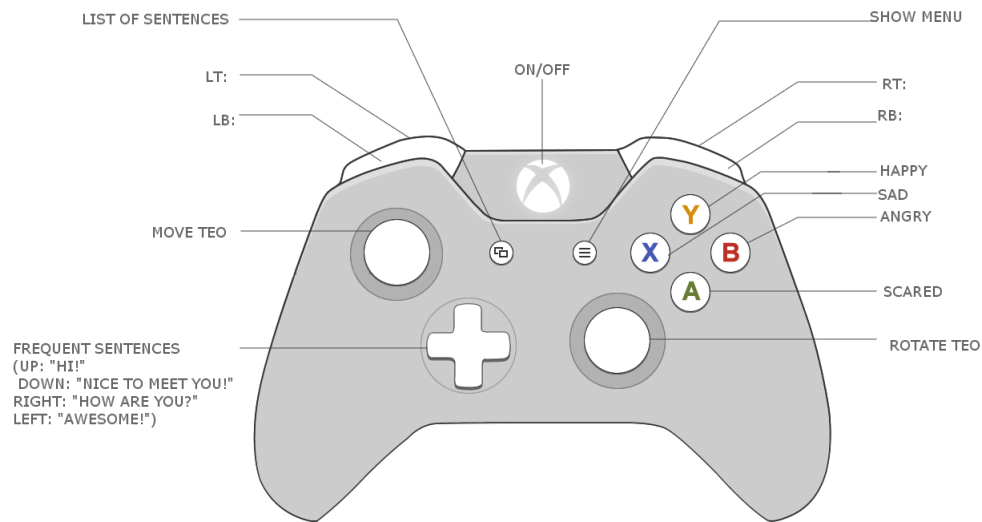

The therapist selects «Talk2Teo».

1.2.1.2 Goal

Talking to the user showing empathetic behaviours.

1.2.1.3 Activities

Teo can talk to the user through automatic and manual behaviours.
The therapist/teacher controls the manual ones using the joypad.
Manual behaviours have higher priority on the automatic ones.

Manual behaviours:**Automatic behaviours:**

- User calls Teo => Teo says «Here I am!» and reacts happily
- User makes a long pause => Teo says «Hey, are you ok?» and reacts sadly
- User is talking => Backchanneling («yeah», «ok», «uh huh», «mhm») and react happily
- User laughs => Teo reacts happily
- User exits from social space => Teo says «Where are you? Are you leaving?» and reacts sadly.

Table 1.1: idleState behaviours

1.2.1.4 Superability Manual Mappings

Area: Socialization

- shows different emotional states based on the context
- greets verbally on demand
- responds verbally to greetings

1.2.1.5 HW required

Led matrix, speaker, microphones, motion/distance sensors, remote pc.

1.2.1.6 SW required

Face simulator, voice recognizer, voice simulator, remote control software.
